

THE SELF-IMPROVING AI WORKFORCE FOR REGULATED ENTERPRISES

An AI workforce that *improves itself* — and proves it.

A team of AI specialists that learns from its own work and gets measurably better over time — running on **your** data, under your control, with a record of everything it does. Not a chatbot. Not a framework. A workforce you can actually deploy where the work matters.

It gets better over time

The work compounds instead of staying flat — no retraining project, no consultants.

It runs on your data

Self-hosted or fully air-gapped, in your environment. Nothing leaves to be trained on.

You can prove what it did

Every action recorded and reversible — an answer for the auditor, the CISO, the regulator.

WHAT SETS IT APART

It **gets better the more it works.**

The workforce learns from its own results and quietly improves — the way a good team does, except it never forgets and never plateaus. You don't manage a retraining project; it happens on its own, in the background.

It **builds the specialists you need.**

Describe a job — or just let it watch someone do it — and Lightwork stands up a new governed specialist for it, held to the same safety bar as the rest, and gets better at building them over time.

And it **proves it never got worse.**

Every improvement is measured before it goes live and undone in one step if it doesn't help. You get a report of what actually got better — not a vendor's promise that it did.

It **grounds its work in real sources.**

Your analysts cite authoritative data — regulatory filings, government and market data — instead of guessing from memory. Fewer made-up answers, more work you can defend.

BUILT TO CLEAR YOUR SECURITY REVIEW

Every action is checked, recorded, and reversible — by design.

- ✓ **A tamper-proof record.** Everything the workforce does is signed and sealed — prove what happened, to anyone who asks.
- ✓ **A human signs off.** Agents draft and recommend; a credentialed person approves anything that matters.
- ✓ **Your data stays yours.** Self-hosted or air-gapped, with no required path off your environment, even under attack.
- ✓ **Safety the whole workforce shares.** The same guardrails are enforced and independently stress-tested across every specialist.

A WORKFORCE YOU SWITCH ON — AND IT GROWS WITH YOU

2,020

specialists, built in

Across 53 departments — Finance, Tax, Legal, healthcare, insurance, banking, and more. Each has a fixed job and a human who signs off.

Any

role you don't see

Lightwork builds the specialist you need from a description, or a demonstration of the work — ready for your operation, not a generic template.

All

your other agents, governed

Bring the agents you already run — Agentforce, Copilot, in-house, open-source — under one record and one shared memory.

We don't say it's governed. We show it.
